PROJECT: ComicCraft

DOCUMENT: Demonstration of Proposed Solution

Live Demonstration Screenshots:

Step 1: VS Code Project Structure - app/services/ contains 5 files (comic_service.py, gemini.py, image_generator.py, layout_builder.py, pdf_exporter.py)

Step 2: Running run.bat - Flask server starts at http://127.0.0.1:5000

Step 3: UI - User enters prompt: "A cute robot learns to make friends in school"

Step 4: Generation - Backend logs: Calling Gemini API -> Story generated -> Calling HuggingFace SDXL -> 6 images saved in static/panels/

Step 5: Preview - 6 panels appear in browser via static/js/app.js

Step 6: Final Output - User clicks Download PDF -> PDF opens from exports/comic_xxx.pdf with Title + 6 panels + dialogues

Proof: test_huggingface_image.png attached shows API working
