PROJECT: ComicCraft

DOCUMENT: Scalability and Future Plan

Current Limitations:

- Local storage only (static/panels, exports)
- Single user, no login
- English only, fixed 6 panels
- No character consistency across panels

Scalability Plan:

1. Deployment: Host Flask on Render / HuggingFace Spaces / AWS EC2
2. Database: Replace app/store.py with MongoDB/Firebase to store user comics
3. Authentication: Add login to save comic history
4. Queue System: Use Celery + Redis for multiple users generating at same time
5. Cloud Storage: Use S3 for panels and PDFs

Future Enhancements:

1. Multi-language: Tamil, Hindi comics using Gemini translation
2. Voice Narration: Add voice-over for each panel
3. Character Consistency: Use LoRA training to keep same character face
4. Style Selection: User can choose Manga, Marvel, Chibi, Realistic
5. Direct Publish: Publish to Webtoon, Instagram, YouTube Shorts
6. Edit Feature: Regenerate single panel if user doesn't like it
7. Mobile App: Same Flask API with Flutter app

Vision: Complete AI Story Studio
